IO

SINGLE & PARALLEL AUTOCLAVABLE FERMENTERS/ BIOREACTORS

SOLARIS
BIOTECH SOLUTIONS

SINGLE & PARALLEL MINI FERMENTERS/BIOREACTORS

IO

IO, the smallest scale Solaris platform, offers 200 ml and 1000 ml total volume autoclavable vessel sizes. The system utilizes innovative Leonardo software, capable of managing up to 24 systems in parallel.

IO typical applications includes the following:
Education & Basic research
Scale-up and scale-down studies
Process development and optimization

IO can be used for:
Biopharmaceutical
Biofuels
Food industry
Bioremediation
Bioplastic
Cosmeceutical
Nutraceutical

WHY TO INVEST IN THIS PRODUCT

Fast and accurate thermoregulation without water circulation

Parallel control up to **24 units**

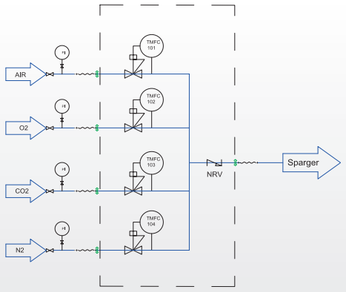
SINGLE & PARALLEL MINI FERMENTERS/BIOREACTORS

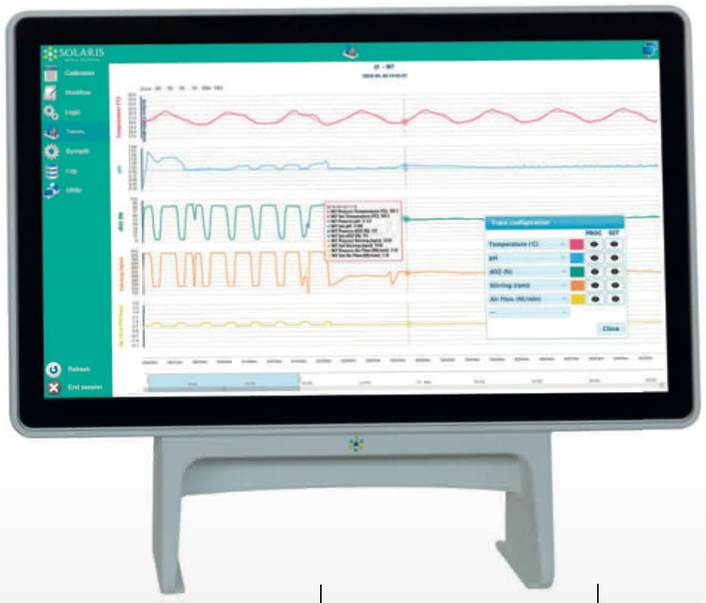
Benefits

Up to 24 units managed with one HMI
with innovative PARALLEL process control
LEONARDO: smart controller designed to provide an high level of automated
management of the fermentation/cultivation processes

Batch, Fed batch
or continous processes

Different gas mixing strategies with up to 5 TMFC





24" HMI

Remote control via PC, tablet and smartphone for process management and after sale assistance

Powerful/ Accurate **brushless motor**, from 1 to 2000 RPM.
Online absorbed Torques (Nm) and Power (W) measurements obtaining an indirect density indication of the culture broth

Modbus Digital sensors

N.4 assignable Watson Marlow pumps in entry level

No water circulation:
Thermoregulation performed through Peltier cell

LEDA safe sterile sampling system
The needle free connector is designed to reduce the risk of contamination during sampling.
The sterile combination of a syringe (3-5-10-30 ml) and a non return valve guarantees the sterility after sampling until the next use.

Compact and modular PCS

Additional parameter in modular external boxes for future PCS upgrade Including dCO_2, cell density, weight, peristaltic pumps, ect

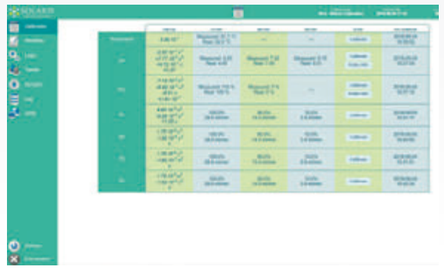
Modbus Digital sensors

Why a digital sensor?

Digital sensors (including Cell Density products) have been integrated to the Solaris PCS and Leonardo controlling software, giving the user many benefits over traditional analog sensor outputs. Such benefits include a robust communication protocol not susceptible to signal loss, in-software sensor diagnostic information, parallel calibration/batch calibrations and more.



Sensor life traceability

Reducing background noise

Smart PCS

Solaris new modular product design strategy decreases time to market and the number of unique parts in the product architecture, increasing the number of product variants. The result is a lean, flexible and smart PCS, which can be stacked in case of parallel processes through a dedicated support.

Optimize Lab Space!

Additional parameters in modular external boxes for future PCS upgrade including dCO_2, Cell Density, Weight, Peristaltic pumps, ect.

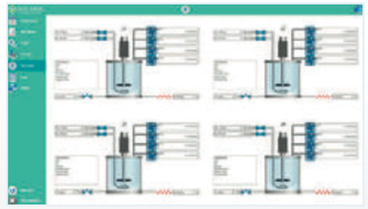
Leonardo 3.0

USER-FRIENDLY SOFTWARE

Solaris controlling software offers a simply laid out, yet powerful platform for experimental design planning and process control. The graphical user interface enables the intuitive selection and adjustment of control functions.
Extracted data is compatible with Window Excel but, in addition, Solaris offers a platform where fermentation data can be easily exported in real time and thus managed. This software is included in the supply and can be installed on an unlimited numer of the client's PC or laptops.

Do it parallel: smarter..faster

Leonardo allows intuitive and time-saving parallel operations. Up to 24 indipendent fermentations/cultivations can be carried out simultaneously.



Parallel synoptic.

Do it wireless!

Increase mobility: users have the option to access the platform remotely, via PC, tablet, phone. Remote access is multi-level password protected.
