

## PureFlo<sup>®</sup> Charged Nylon Cartridges (Charged Nylon Membrane with PP Construction)

### High Contaminant Removal

PureFlo<sup>®</sup> Charged Nylon Cartridges are designed to remove particles smaller than its rated pore size with the power of electrical attraction (adsorption/adhesion). Many particles in water and other liquids have a negative charge that can be captured by a positively charged filter. This property, combined with particle size exclusion (sieving) and an impaction/interception capture mechanism make this charged nylon filter extremely efficient.

The PureFlo<sup>®</sup> Charged Nylon Cartridges are naturally hydrophilic nylon membrane filters with a polyester support layer for added wettability of the membrane. The nylon membrane in an all-polypropylene construction provides excellent chemical compatibility and superior flow per unit area as compared to other membrane cartridges. No adhesives, binders, or surfactants are used in the manufacturing process and all cartridges are rinsed with high-purity water to reduce extractables and downtime. All filter cartridges are 100% integrity tested to ensure filter performance each and every time out of the package.

**Sterilization & Autoclaving:**

The filters can be sterilized by autoclaving for up to 5 cycles at 125 °C (257 °F) for 30 minutes. The filters can also be sterilized by steam-in-place procedure up to 3 cycles at 135 °C (275 °F) for 30 minutes at less than 0.3 bar (4.35 psi) differential pressure. The filters can also be sanitized by hot water or common chemicals that are compatible with filter components.
